## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-12, drawn to a method for performing layer extraction used for motion detection, classified in class 382, subclass 107 (motion or velocity measuring).
  - II. Claims 13-16, drawn to a method for estimating upper and lower bounds of a sequence of images used for feature extraction, classified in class 382, subclass 190 (feature extraction).
  - III. Claims 17-20, drawn to a constrained least-square method for recovering image components, classified in class 382, subclass 215 (using dynamic programming or elastic templates).

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I, II, and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because claim 1, which is the broadest combination claim, does not require estimating the upper and lower bounds of a sequence of images as called for in claim 13, which is the broadest subcombination claim of Group II. Claim 1 also does not require the use of a constrained least-squares calculation to recover image components as called for in claim 17, which is the broadest subcombination claim of Group III. The subcombinations have separate

utilities such as a feature extraction method for the subcombination of Group II, and a Quadratic programming technique for the recovery of images for the subcombination of Group III.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

4. A telephone call was made to Richard T. Lyon (Reg. No. 37,385) on September 29, 2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
